

Downloading a list of parcel pick-up stations without the use of API

One has made available a new feature of downloading a list of parcel pick-up stations and collection points without the need to authorize and use API methods. The solution may be used directly on the view by the tips for the collection point selection field. A list with a unique point number, type, address and geographic coordinates is returned. <http://dev.meestb2b.com/administration/api/division.html?cityIDRRRef=0xb11200215aee3ebe11df749b62c3d54a>

As a parameter it adopts the ID of the selected city.

Example of reply:

```
[{"DivisionIDRRRef":"0x9beb003048d2b47311e415ce242ac8ec","DescriptionUA":".
,. 5-5","DescriptionRU":".,. 5-
5","RegionIDRRRef":"0xbe1e0030485903e811de60b0d15e3024","RegionDescriptionU
A":"","RegionDescriptionRU":"","RegionDescriptionEN":"LVIVS`KA","DistrictI

```

Also can use only: <http://dev.meestb2b.com/administration/api/division.html> it'll return all pickuppoints also points Meest Partner with parameter: DivisionType: 5.

After version 2.7.5.9 is possibility of filtering by payType using boolean values true and false in request using those parameters is optional.

Sample request:

```
http://dev.meestb2b.com/administration/api/division.html?cardPayType=true&
cashPayType=false&terminalCash=true
```

After version 3.0 there is possibility of downloading points for other countries ex:

```
http://dev.meestb2b.com/administration/api/division.html?carriersAndCountr
y=SPRINTER_HU,ZASILKOVNA_CZ
```

Sequence of parameters is important CARRIER_COUNTRYCODE
